Education

Software Engineering Co-op (B.Eng.)

Expected May 2029

McMaster University, Hamilton, Ontario

Current GPA McMaster Scale: 9.0 GPA

Projects

Banking System

July 2025- August 2025

Personal

- Developed a built-in banking system in C, consisting of a credential verification, a menu, account status display, allows transaction operations allowing user to withdraw, deposit, and transfer money, and provides overall user feedback
- Implemented safe input handling and basic security, using a custom string comparison for the login/password and a locks access after three failed login attempts with error messages displaying whenever the input credentials were incorrect.
- Implemented transaction rules and live balance updates; rejecting withdrawals or transfers that exceed the available balance, catches invalid account selection, and prints out the correct amount of balance after the transaction

Slicer Device

February 2025- April 2025

McMaster University

- Designed, CAD-modeled, 3D-printed, and fabricated an adaptive food slicer that is integrated with a cutting board, and a low-frequency audio cue system that signals the user to slice for a client with Usher syndrome in a group of 5
- Delivered the final build that demonstrated safe, intuitive operations to support independent use, allowing the client to move the food smoothly and cut with audio cues without risks of injuries

Luggage Check-In System

September 2024- December 2024

McMaster University

- CAD-modeled and 3D-printed a linear actuator mechanism consisting of a scissor lift, two platforms, and railing for transporting luggage from conveyor to an airplane in a group of 4
- Built a Python script that reads two csv files and computes late-layover passenger counts per aircraft/gate to flag potential delay hotspots

Competencies

- **Technical Skills:** Python, C, MATLAB, Java, C
- **Tools:** Excel, Word, PowerPoint, DaVinci Resolve, Autodesk AutoCAD, Autodesk Inventor,
